EDUCATION AND TRAINING

Master's in Artificial Intelligence

Brandenburg University of Technology Cottbus-Senftenberg (BTU) [05/10/2026 – Current]

City: Cottbus | **Country:** Germany

Bachelor's in Artificial Intelligence and Data Science

KL University [20/11/2020 – 01/05/2024]

City: Vijayawada | **Country:** India

WORK EXPERIENCE

Aurum Data Solutions – Hyderabad, India

Software Engineer I

[01/04/2025 – 16/09/2026]

- Developed and maintained Java REST APIs using Spring Boot and Quarkus for event-driven backend services and business workflows.
- Used LiquidJS for dynamic payload formatting, data transformation, and template-based processing.
- Contributed to DB2-to-MongoDB migration, including data mapping, schema redesign, and data transformation.
- Worked with Google Cloud Platform (GCP) services including Pub/Sub, Cloud Storage, Cloud Run, and Secret Manager.
- Implemented Pub/Sub-based asynchronous communication for event-driven application workflows and developed CRUD APIs for internal and external service integration.
- Worked with Docker and CI/CD pipelines for application build, deployment, and troubleshooting, and resolved API, authentication, SSL/TLS, and cloud connectivity issues in collaboration with SRE and cross-functional teams.
- Leveraged AI-assisted development tools to automate data transformation workflows, reducing manual effort by 30% and improving efficiency.

Accenture – Hyderabad, India

Associate Software Engineer

[14/08/2024 – 30/01/2025]

- Completed a comprehensive training program in Java full-stack development, including core Java, Spring Boot, Hibernate, and front-end technologies (HTML, CSS, JavaScript).
- Collaborated with peers to troubleshoot technical challenges and build scalable web applications, enhancing problem-solving and teamwork skills

SKILLS

Programming languages

Java / Python / SQL

Backend Development

Web framework: Django / Spring Boot / LIquid JS / REST API / Microservices / Quarkus / FastAPI

Databases & Data Management

SQL / NoSql Databases (MongoDB) / PostgreSQL / SQ Lite / DB2

Cloud & DevOps

CI /CD / Google Cloud Platform (GCP): Cloud Run, Cloud Storage, Pub/Sub, Secret Manager / Git/Github, Docker, Gitlab

Software Engineering & Tools

Agile project management / Azure DevOps / Microservice, Monolithic / Atlassian Confluence

AI & Machine Learning

LLM API integration / Machine Learning (AI, DL, CNN) / RAG / computer vision / Gen AI / Deep learning / Model Context Protocol (MCP)

PROJECTS

[02/10/2026 – Current]

Industrial AI Maintenance Assistant

- Developing an AI-powered maintenance assistant to help factory workers troubleshoot machine failures using technical manuals, daily logs, and historical repair records.
- Building REST APIs and a web interface for machine registration, PDF manual management, and structured storage of maintenance incidents, repair procedures, and outcomes.
- Implementing a RAG pipeline with PyMuPDF, ChromaDB, and Sentence Transformers to retrieve relevant historical repairs and machine-specific manual content for troubleshooting queries.
- Exploring local Hugging Face LLM integration to generate context-aware maintenance recommendations grounded in retrieved technical documentation and historical records.

[15/12/2023 – 22/03/2024]

Facial web Authentication System

- Developed a CNN-based facial authentication system using Python, OpenCV, and Deep Learning for user identification.
- Created and curated a custom facial image dataset through data collection, labeling, preprocessing, and augmentation to improve model generalization.
- Applied Haar Cascade for face detection and extraction, followed by CNN-based facial recognition for authentication.
- Developed a web-based authentication interface using Django, HTML, CSS, and JavaScript, with PostgreSQL for user and authentication data
